Get Your Legs Ready for Summer!

EXTENDED HOURS

Our doctors have extended their hours to serve you better. Give us a call to setup a time that is convenient to your schedule!

Did you know?

Over 20 million Americans have some type of Venous insufficiencies?

By the age of 50, nearly 40% of women and 20% of men have significant vein problems.

More people lose work time from vein disorders than from artery disease.

Summer Tips for Great Looking Legs

Dear Kevin,

Greetings and Happy Spring,

We believe it is safe to say that the long and cold winter is finally behind us. With warmer days ahead, we just wanted to welcome you back to the vibrant feel of spring and warmth of summer. If you've been thinking about trying "Sclerotherapy" for the first time, there has never been a better time. Our doctors have extended their hours to serve you better. Come witness the "instant results" of our "Get Your Legs Ready for Summer"! (Take advantage of our seasonal special offers listed below.)

Hope to see you soon!

Spider Veins? / Get Your Legs Ready for Summer!

Since 1986, the board certified doctors of the Vein Institute of New Jersey, have provided exceptional patient care to our New Jersey communities and the tri-state area. Patients and doctors from all over the world come to the Vein Institute for both treatment and or training. The Institute's state of the art facilities and use of the very latest technologies make the Vein Institute of New Jersey one of the top treatment locations in the world.

Doctors Agis, Moritz and Ombrellino agree that "as spring approaches, many of our patients are already thinking about wearing shorts and bathing suits during the summer months. We always see a surge of patients in the late winter and early spring, all looking forward to removing those unsightly spider veins." The doctors at the Vein Institute have great pride in the fact that this practice was first in the State of New Jersey to be solely dedicated to the treatment of venous problems.

In addition to the simple treatment of removing spider veins and facial veins, the Institute also provides the latest laser techniques for the removal of varicose veins.

Sunscreen Often

Exercise Regularly

Moisturize Daily

Laugh and Enjoy Life!

The doctors added, "Our minimally invasive vein procedures can be done in the office with no surgery, no general anesthesia and little to no downtime. This is a great advantage to our patients with busy lifestyles. The procedures are quick and involve minimal discomfort. In most cases, after treatment, a patient can simply walk out of the office and resume normal activities the same day".

Since varicose veins can often be hereditary, many patients have seen their grandparents or parents go through the older, outdated surgical procedure, with great concern.

"Thankfully for our patients, this is no longer the case. We are so pleased to announce that we can offer them alternative treatments for the removal of those unsightly varicose veins". The latest medical advances performed at the Institute has our patients back on their feet and mobile, only moments after the procedure is over.

The Vein Institute of New Jersey also offers a fully ICAVL accredited Vascular Laboratory. This facility provides full venous and arterial screening capabilities for our patients as well as for those in the general public. (Carotid, Renal, Aortic Aneurysm, Clots etc).

The warm and caring staff at the Vein Institute will ensure that your visit will be professional, courteous and prompt.
